

ANJU SAMBASIVAN

Data Analyst | Business Intelligence

Profile

Data Analyst with a Master of Applied Data Science from the University of Canterbury and industry experience in data analysis, business intelligence and data science. Skilled in Python, SQL, Power BI, ETL, data modelling and data warehousing, with hands-on experience building data pipelines, dashboards and automated reporting solutions. Experienced in analysing complex datasets, developing clear visualisations and turning data into meaningful insights. Strong analytical and problem-solving skills with experience working with researchers and stakeholders to deliver practical data solutions.

Experience

Public Health and Forensic Science (PHF Science) - Data Scientist (Fixed - Term)

Christchurch 01/2026 - 06/2026

Developed an AI-powered reporting platform that helped researchers automatically create public health and community wellbeing reports from data.

- Built a Microsoft Word Add-in using React, TypeScript and Office.js.
- Generated statistics, tables, charts, maps and AI content directly in Word.
- Built REST APIs using Node.js and Express.js to retrieve data from PostgreSQL.
- Used Word content controls to save selections and automatically refresh reports.
- Developed reusable React components and managed state using Zustand.
- Created charts and SVG visualisations for reports.
- Integrated LLMs to generate summaries, captions and analytical insights.
- Implemented authentication and secure frontend, backend and database communication.
- Tested application features, APIs and data outputs to identify errors and validate results.
- Debugged frontend, backend, database and integration issues.
- Worked with researchers and analysts to turn requirements into software features.
- Worked across the SDLC from requirements and development to testing and deployment.

Education

01/2026

University of Canterbury

Christchurch, NZ

Master of Applied Data Science

06/2019

**APJ Abdul Kalam Technological
University**

Kerala, India

Master of Technology: Computer
and Information Sciences

05/2014

Mahatma Gandhi University

Kerala, India

Bachelor of Technology: Computer
Science

Public Health and Forensic Science (PHF Science) - Data Science Research Intern

Christchurch

07/2025 - 01/2026

Developed a Community Health and Wellbeing Reporting Platform to automate data analysis and reporting across New Zealand.

- Built Python ETL pipelines to clean, transform and combine multiple public datasets.
- Used Pandas and NumPy to calculate wellbeing indicators, population measures, percentages and crime rates.
- Performed spatial analysis and mapping across SA2 and Territorial Authority (TA) areas using GeoPandas and Shapely.
- Developed weighted wellbeing scores to compare patterns across communities.
- Aggregated SA2 data to TA level using geographic and weighted calculations.
- Created statistical charts, maps and visualisations using Matplotlib, Seaborn and Folium.
- Built a metadata-driven framework to automatically process different datasets, indicators and years.
- Developed reusable modules for data cleaning, analysis, spatial processing and visualisation.
- Used docxtpl and Word templates to automatically generate Community Health and Wellbeing Profiles with data, charts and maps.
- Worked with researchers to understand requirements and develop practical analytical solutions.

MVP Studio (Remote) - Data Analyst Intern

New Zealand

03/2024 - 07/2024

Developed a Business Intelligence solution to analyse Australian property, location and school data using SQL Server, SSIS and Power BI.

- Built a SQL Server data warehouse using a star schema with fact and dimension tables.
- Developed SSIS ETL pipelines to load, clean, transform and store CSV and Excel data.
- Cleaned property, location and school data, handling missing, duplicate and inconsistent records.
- Created property value categories using SSIS transformations.
- Used SQL joins, aggregations and validation queries to combine and check data.
- Created SQL views to prepare reporting data for Power BI.
- Built a Power BI data model with relationships and DAX measures for property values, counts and rankings.
- Developed interactive dashboards to analyse property values by city, suburb, postcode and value category.
- Created geographic visualisations using latitude and longitude.

Skills

Data Analysis & BI: Power BI, DAX, Excel, Data Analysis, Data Visualisation

Programming: SQL, Python, R

Data Engineering: ETL, SSIS, Data Integration, Data Warehousing, Data Modelling, Star Schema

Databases: PostgreSQL, SQL Server

AI & Machine Learning: Machine Learning, Predictive Modelling, Generative AI, LLMs

Development: React, Node.js, Express.js, REST APIs, Office.js

Geospatial: GeoPandas, Shapely, Folium, Spatial Analysis

Tools & DevOps: Git, GitHub, Docker, Azure DevOps

Certifications

- [Industry Connect Expert Certification](#)
- [Data Analysis: SQL, Power BI & Excel - Udemy](#)
- [Microsoft Certified: AZ 900](#)
- [SQL for Data Analysis](#)
- [Learning Power BI Desktop](#)
- [Power BI Data Modeling with DAX](#)
- [Docker in a Weekend: 40 Practical Demos for DevOps Learners - Udemy](#)

- Tested SSIS pipelines, SQL data and Power BI reports to ensure accurate results.

Outlier (Remote) - Data Annotator

New Zealand

02/2024 - 07/2024

Supported LLM evaluation by reviewing AI-generated responses, checking quality and providing structured feedback.

- Evaluated AI-generated responses for accuracy and quality, ensuring they met guidelines.
- Reviewed prompts and responses to identify errors and areas for improvement.
- Created and validated annotated data used to support AI model refinement.
- Applied annotation and quality-control guidelines to maintain consistent evaluation standards.
- Provided structured feedback on model responses and reasoning.

Enatel (Full Time) - Electronic Assembler

New Zealand

02/2023 - 07/2024

Worked in an electronics manufacturing environment, performing assembly, production, quality inspection and product testing to ensure products met technical specifications and reliability standards.

- Assembled electronic components following technical specifications, procedures, and quality requirements.
- Conducted product inspections and testing to identify defects and ensure compliance with quality standards.
- Performed precision soldering and component assembly while minimizing errors and rework.
- Supported final product validation to ensure functionality before customer delivery.

Gurudeva Institute of Science & Technology - Lecturer

India

08/2019 - 08/2020

Delivered undergraduate courses in Python, SQL and Database Management Systems, helping students develop practical programming, database and problem-solving skills.

- Designed practical programming and database exercises covering Python scripting, SQL queries, joins, subqueries, CRUD operations and data manipulation.

Publications & Presentations

- Presented the Community Health and Wellbeing Project at the eResearch NZ 2026 Conference, University of Auckland, highlighting the use of data to better understand communities across New Zealand.
- Presented and published “Study of AI-Based Methods for Electricity Load Forecasting” at the 9th National Conference on Indian Language Computing, Cochin University.
- Presented “Electricity Load Forecasting Using Statistical Methods - A Study” at the 3rd National Conference on Advances in Informatics and Computing Technologies, APJ Abdul Kalam Technological University.

- Guided students in application development, relational database design, ER modelling, normalization and problem-solving.
- Reviewed and tested student code and database projects, identifying errors and providing technical feedback.
- Supported students with debugging and troubleshooting programming and database issues.

Brain Script Analytica - Associate Analyst

India

11/2018 - 07/2019

Developed and evaluated machine learning models to predict electricity demand using historical data.

- Analysed and prepared historical electricity demand data using Python, Pandas and NumPy.
- Built and compared Linear Regression, SVR, Decision Tree, Random Forest, XGBoost and ANN models.
- Applied data preprocessing techniques, including train-test splitting, Min-Max normalization and Z-score standardization, and compared their impact on model performance.
- Developed the ANN model using TensorFlow and Keras.
- Tuned model parameters to improve prediction accuracy.
- Evaluated model performance using MAE, MSE, RMSE and R².
- Visualised actual and predicted electricity demand using Matplotlib and identified the best-performing model.
