Ōpōtiki District

Territorial Authority

Community Wellbeing Profile

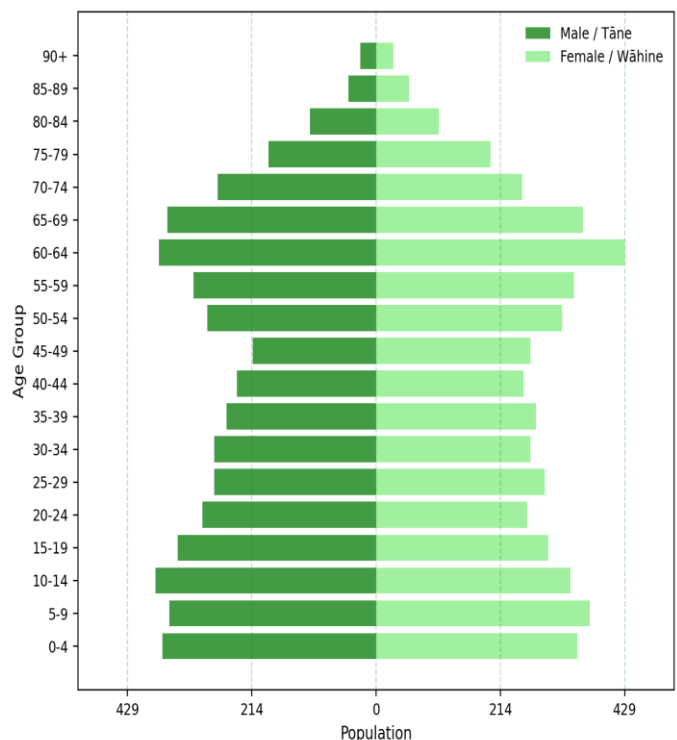

Population and Area Summary

In **Ōpōtiki District**, the total population in 2023 was **10,089**, covering an area of **3089.7 km²**. This gives a population density of **3.3** people per **km²** across **6** Statistical Area 2 (SA2) zones.

The population structure shows that **32.72%** of residents are young people (aged under 20), **47.32%** are of working age (20-64 years), and **19.96%** are elderly (65 years and older).

Wards in this TA are: Coast Ward, Waioeka-Waiōtahe-Otara Ward, Ōpōtiki Ward.

The population pyramid shows the age and gender structure of people in **Ōpōtiki District**. The bars on the left show males (Tāne) and the bars on the right show females (Wāhine). A wide base means there are more young people, while a narrow base shows fewer children and an older population. This helps to understand the balance between young and old people living in Ōpōtiki District.

Total Population: 10,089

Year: 2023

1 Crime Overview

This section summarises reported victimisations within **Ōpōtiki District** for the period **2022-2024**, grouped by key ANZSOC offence categories. The Figure 1.1 presents a bar chart, where each row represents a offence type and each bar shows the total number of victimisations across years. Darker green shades indicate more recent years, making it easy to compare trends across time. This visualisation provides a clear overview of how different crime types contribute to the overall volume of reported incidents and how these patterns have changed over time.

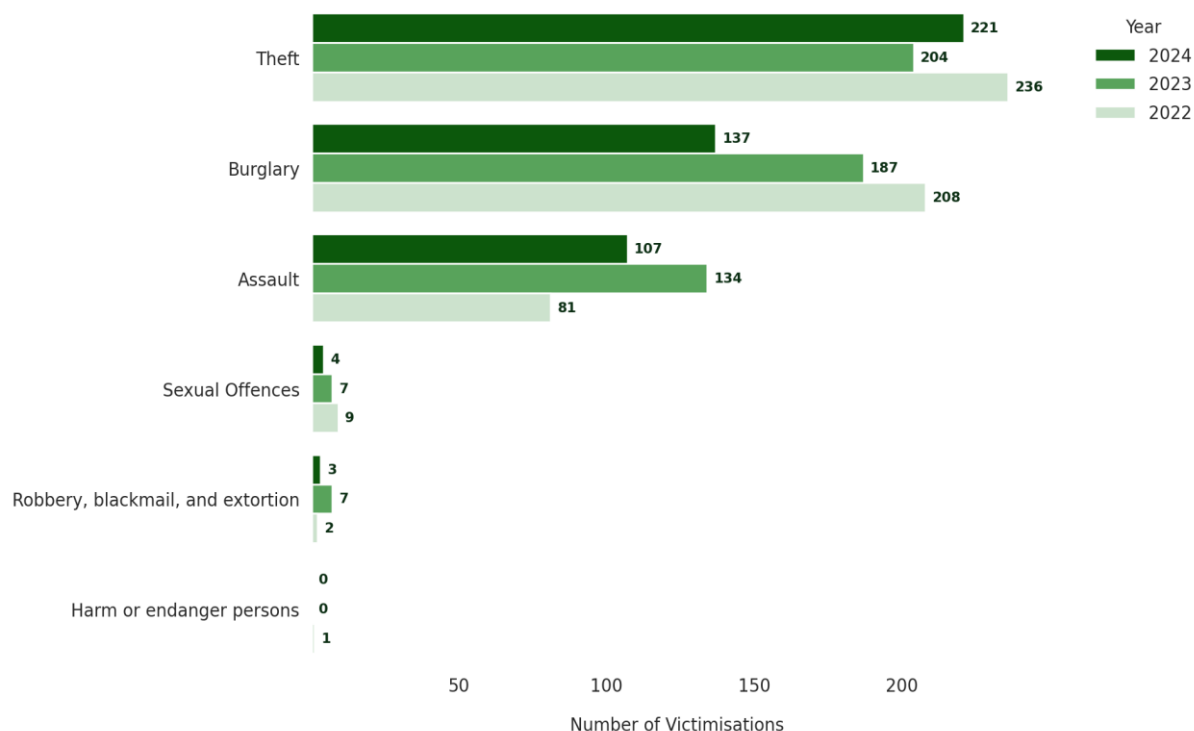

Figure 1.1: Reported victimisations by offence type in Ōpōtiki District, 2022-2024.

Figure 1.2 compares the total population of each Territorial Authority (TA) with its overall victimisation **rate per 1,000 people** in the year **2023**. Each bubble represents one TA, where the bubble size corresponds to the total number of reported victimisations. **Ōpōtiki District** is highlighted as the dark green bubble to show its position relative to other Territorial Authorities. Its placement helps to visualise how **Ōpōtiki District** compares in both total population and victimisation rate. Bubbles positioned higher on the chart indicate areas with higher **victimisation rates**, while those further to the right represent larger **populations**. This visual helps to identify whether higher population centres experience proportionally more or fewer reported offences relative to smaller communities, and where **Ōpōtiki District** sits within the national distribution. The total recorded crime rate was **53.4 victimisations per 1,000 people**.

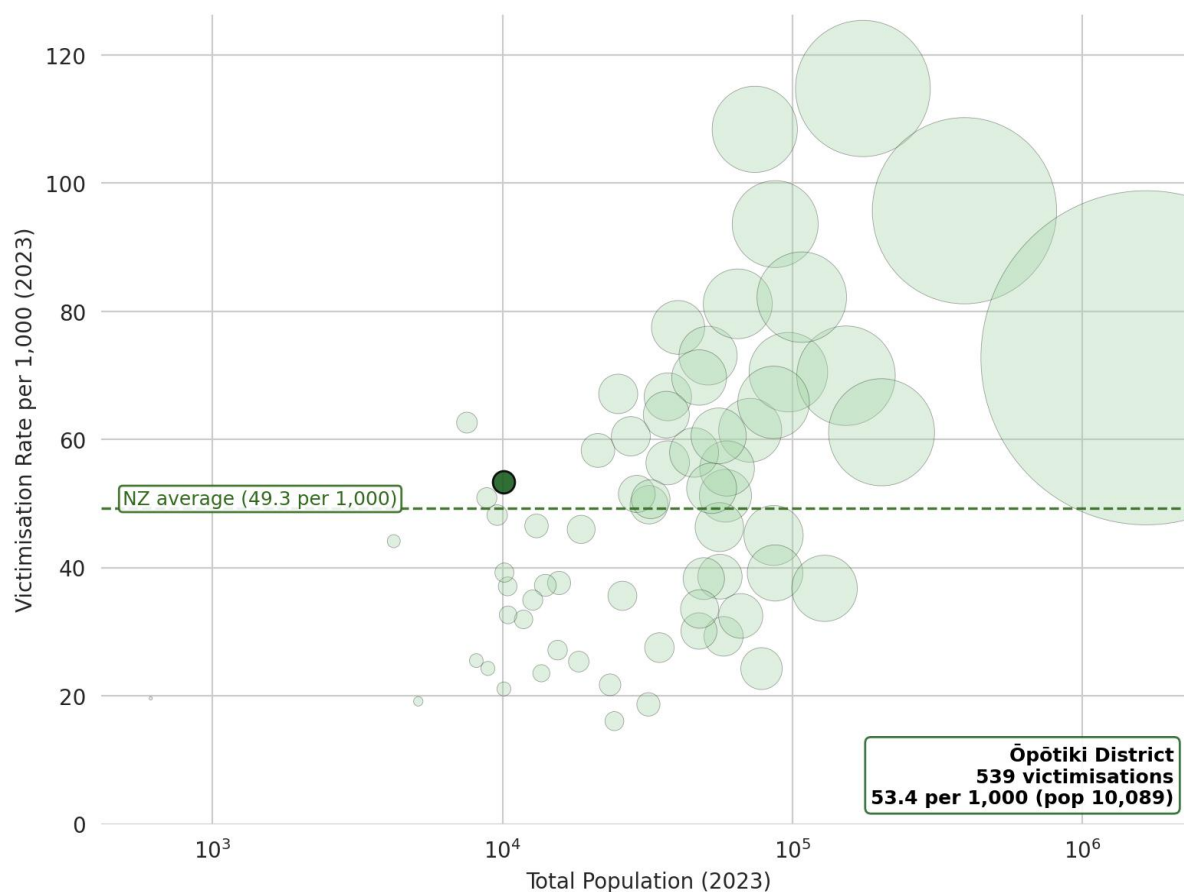

Figure 1.2: Population vs victimisation rate across TAs.

2 Environment Overview

Figure 2.1 provides an overview of key environmental conditions across New Zealand for **2023**. The three maps show average temperature, total rainfall, and greenness (NDVI). Darker green areas indicate higher values, while lighter areas indicate lower values. These national maps help place **Ōpōtiki District** within a wider context by showing how warm, wet, and green different parts of the country were during the year.

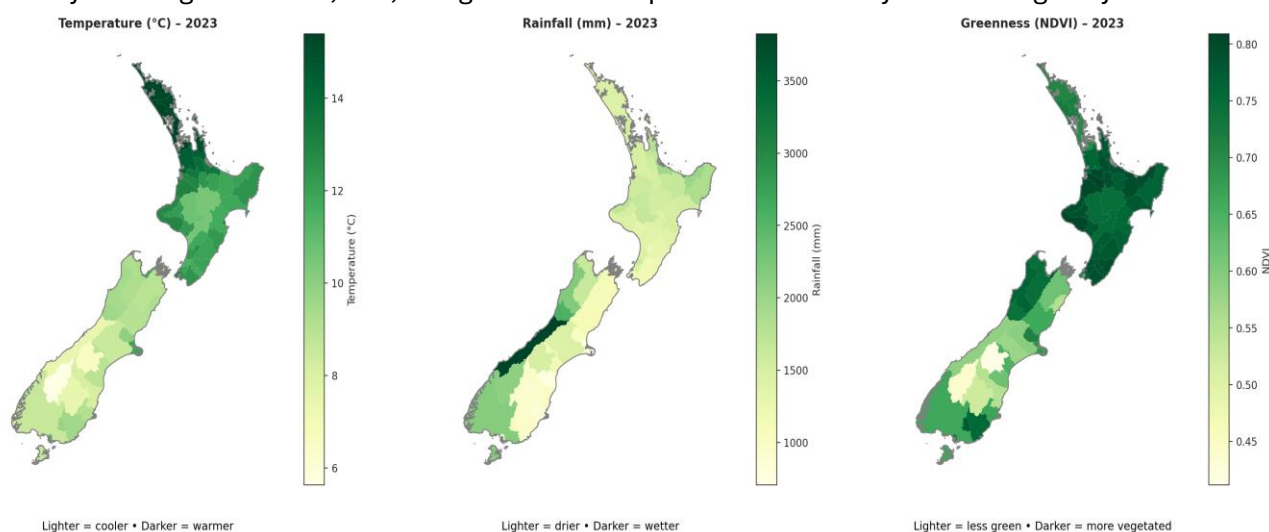

Figure 2.1: National Temperature, Rainfall, and Greenness in 2023

Figure 2.2 shows the spatial variation of temperature, rainfall, and vegetation greenness (NDVI) across the Statistical Areas (SA2s) inside Ōpōtiki District for 2023. Darker green areas represent relatively warmer, wetter,

or more vegetated locations, while lighter areas indicate cooler, drier, or less vegetated zones. These patterns often reflect local topography, elevation, coastlines, and land cover. Together, the maps help identify how climate and vegetation differ within the TA, showing both broad patterns and localised environmental differences.

Note: Areas shown in light grey represent Statistical Areas (SA2s) where environmental data were unavailable. These typically occur in coastal, harbour, or water-dominated regions where satellite observations (ERA5 or MODIS) could not provide reliable temperature, rainfall, or vegetation values. Because ERA5-Land has ~9 km resolution, some SA2 polygons (especially tiny coastal ones) do not intersect a pixel.

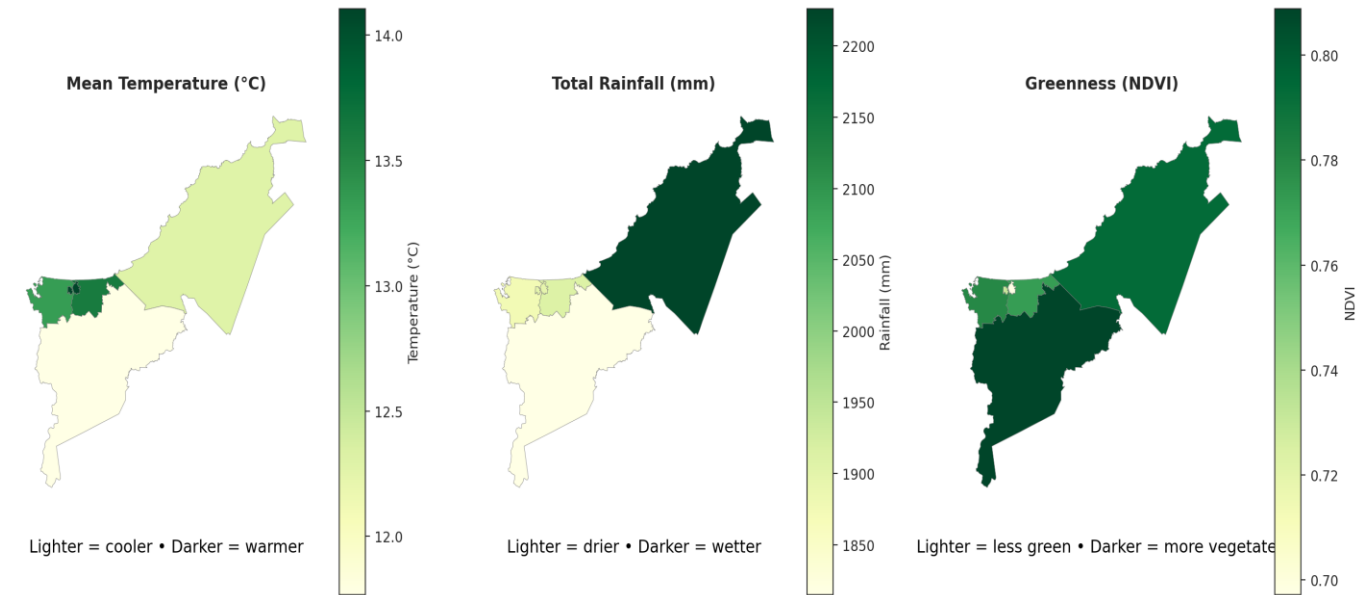

Figure 2.2: Temperature, rainfall, and greenness (NDVI) variation within Ōpōtiki District.

Table 2.1 compares key environmental indicators for Ōpōtiki District with national averages. The table shows the TA’s mean values, the range across its SA2s, and how these compare to New Zealand overall.

Indicators	TA Mean	TA Range	NZ Mean	NZ Range	TA vs NZ Avg
Mean Temperature (°C)	13.2	11.77-14.11	13.28	4.93-16.91	Same
Total Rainfall (mm)	1,936	1,815-2,226	1,350	656-4,122	Higher
Greenness (NDVI)	0.76	0.7-0.81	0.61	0.12-0.83	Higher

Table 2.1: Environmental Indicators - Ōpōtiki District vs National Averages

Figure 2.3 shows average annual **PM_{2.5}** and **NO₂** concentrations across all New Zealand Territorial Authorities for the period **2018-2022**. The top panels show PM_{2.5} (fine particles), and the bottom panels show NO₂ (nitrogen dioxide). Darker shades represent higher concentrations.

Note: PM_{2.5} and NO₂ data taken from satellites. The NO₂ values show how much nitrogen dioxide is in the air above each area, not the amount at ground level. All data were averaged for the year and matched to each TA using Google Earth Engine. PM_{2.5} means very small dust and smoke particles in the air. These tiny particles can go deep into the lungs. They mainly come from car exhaust, wood burners, industrial smoke, dust, and fires. PM_{2.5} is measured as solid particles in the air (µg/m³). NO₂ is a gas, not a particle. It mostly comes from vehicles, trucks, buses, factories, and other fuel-burning activities. In this report, NO₂ is shown as the amount of gas in the air column above each area, measured in mol/m². The values are very small (about 10⁻⁶ mol), so they appear in scientific notation.

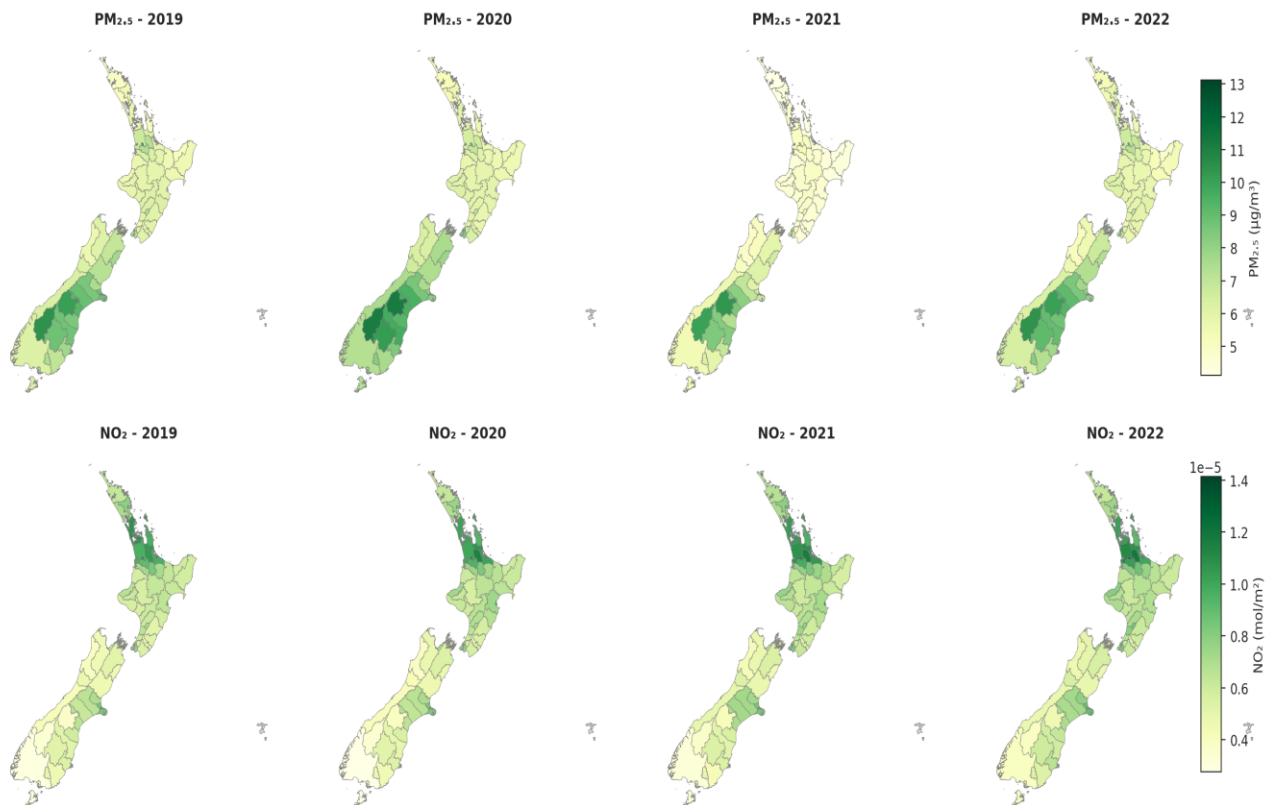

Figure 2.3: TA-level air quality ($PM_{2.5}$ and NO_2).

Figure 2.4 presents the annual $PM_{2.5}$ and NO_2 levels for **Ōpōtiki District** across **2018-2022**. Bars display the measured value for each year, and the line shows the overall trend. This helps identify whether air quality is improving, worsening, or remaining stable over time.

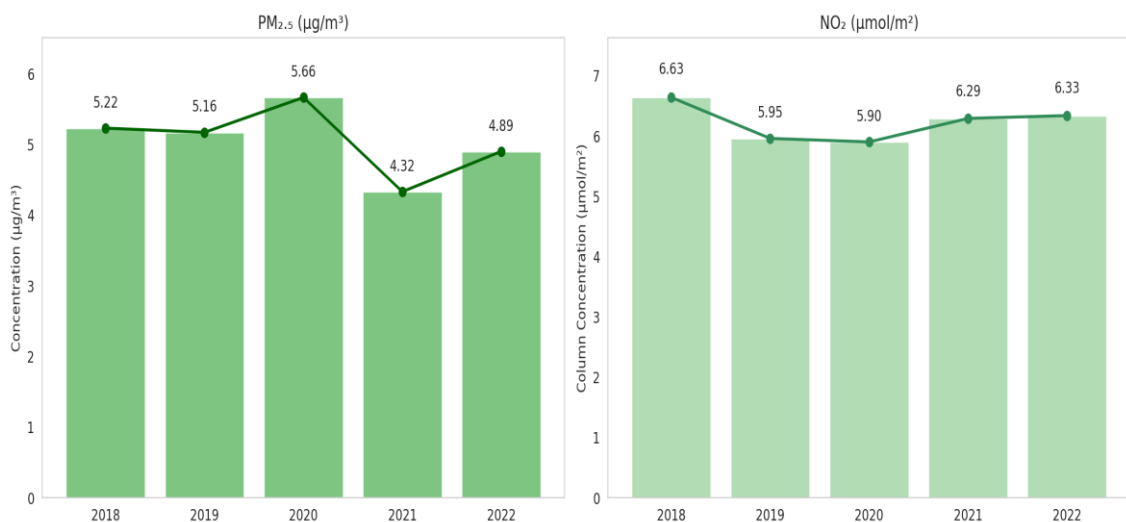

Figure 2.4: Annual $PM_{2.5}$ and NO_2 Trends in Ōpōtiki District

Table 2.2 compares annual NO_2 ($\mu\text{mol}/\text{m}^2$) levels in Ōpōtiki District with national averages. The table shows the TA's mean concentration for each year, the national mean, the national range across all TAs, and whether Ōpōtiki District is higher or lower than the NZ average.

Indicator (Year)	TA Mean	NZ Mean	NZ Range	TA vs NZ Avg
NO_2 (2018)	6.6	6.9	3.0-13.3	Lower
NO_2 (2019)	6.0	6.5	3.0-12.3	Lower
NO_2 (2020)	5.9	6.7	2.8-12.9	Lower
NO_2 (2021)	6.3	7.0	3.2-13.2	Lower
NO_2 (2022)	6.3	7.1	3.9-14.1	Lower

Table 2.2: Air Quality Indicator NO₂ (µmol/m²) - Ōpōtiki District vs National Averages

Table 2.3 summarises PM_{2.5} (µg/m³) levels for Ōpōtiki District compared with national averages. It presents TA mean values by year, the corresponding NZ mean, the national range, and how Ōpōtiki District compares to the New Zealand average.

Indicator (Year)	TA Mean	NZ Mean	NZ Range	TA vs NZ Avg
PM2.5 (2018)	5.22	7.12	5.17-13.12	Lower
PM2.5 (2019)	5.16	6.71	4.96-10.47	Lower
PM2.5 (2020)	5.66	6.96	5.26-11.21	Lower
PM2.5 (2021)	4.32	5.52	4.12-10.34	Lower
PM2.5 (2022)	4.89	6.65	4.89-10.41	Lower

Table 2.3: Air Quality Indicator PM_{2.5} (µg/m³) - Ōpōtiki District vs National Averages

3 Housing Quality: Map & Population Share

This section examines the physical condition of housing across **Ōpōtiki District**. The indicators cover basic amenities, dampness, severe mould, and heating sources. All measures relate to **occupied private dwellings**, and higher percentages generally indicate poorer housing quality.

In 2023, 162 (6.3%) were always damp, 231 (8.9%) were severe mould, 12 (0.5%) were no basic amenities, and 93 (3.5%) were no heating source among occupied private dwellings. Overall, decreases for “Always damp”, “Severe mould”, “No heating source”; while “No basic amenities” remained largely unchanged since 2018.

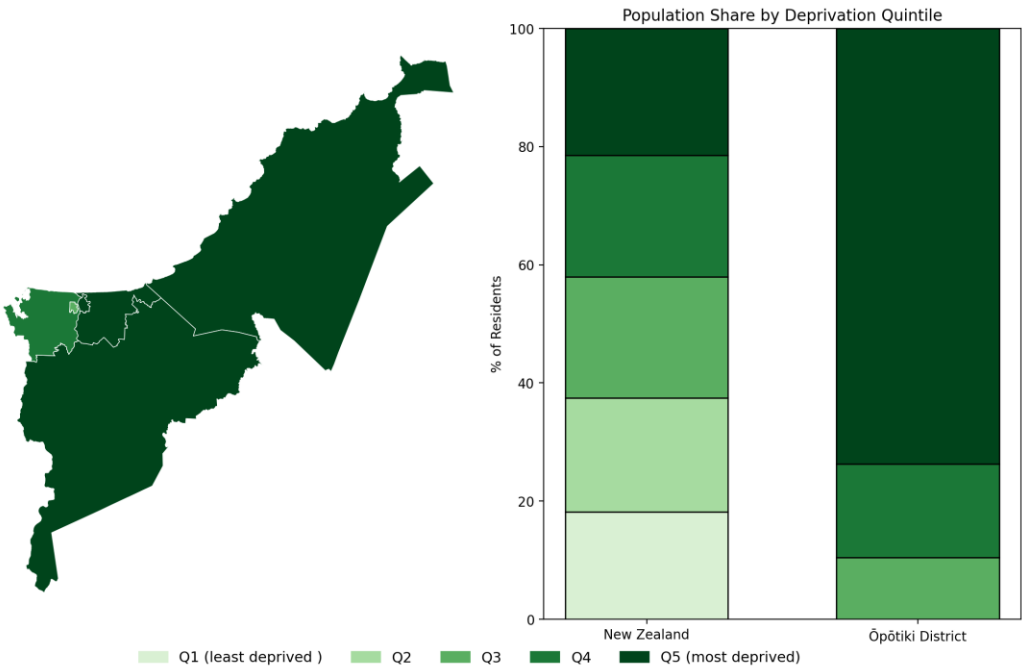

Figure 3: Housing Quality-Map & Population Share.

Figure 3 shows two simple views of housing conditions in **Ōpōtiki District**. The map on the left uses colours to show which neighbourhoods have more housing problems (darker colours) and which are doing better (lighter colours). The bar chart on the right shows how the people in **Ōpōtiki District** are spread across the five deprivation levels and compares this with the New Zealand average. This helps you see whether Ōpōtiki District has more people living in better-off areas or more people living in higher-need areas. Together, the map and chart show where housing challenges are located within the TA and how **Ōpōtiki District** compares with the rest of New Zealand overall.

3.1 Neighbourhood Patterns: Housing Quality

Figure 3.1 heatmap shows how housing conditions change as we move from the least deprived neighbourhoods in the TA to the most deprived ones. Neighbourhoods are first ranked using the composite score, which combines all indicators in the domain into a single overall measure of deprivation. These ranked areas are then split into groups, starting with Group 1 (least deprived) and ending with the last group (most deprived). Each row shows a different housing indicator, and each column shows the typical (median) value for that indicator within each deprivation group. Lighter colours mean better conditions, while darker colours mean worse conditions. If the colours get darker to the right, housing problems worsen with deprivation. If colours stay the same, the problems are evenly spread. If colours jump up and down, the problem is local to certain neighbourhoods, not linked to deprivation.

Note: When an SA2 has very few households, even a small change in the numerator can produce a large percentage, which may cause a darker cell in the heatmap. These patterns are normal in small-area data and should be interpreted as local variation rather than widespread issues across the TA.

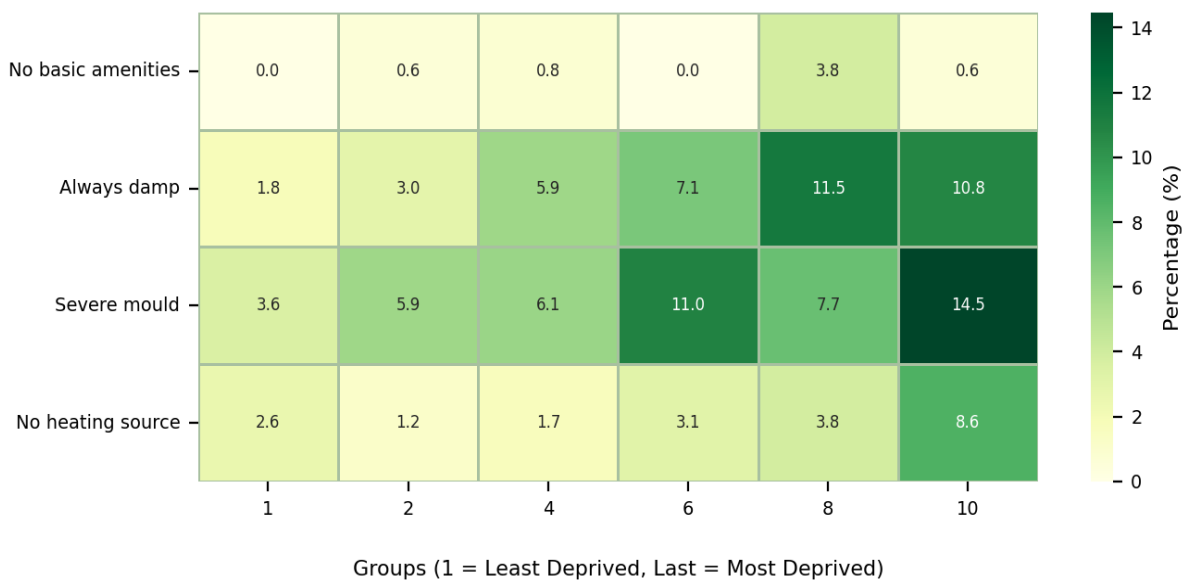

Figure 3.1: Housing Quality-Indicator Patterns Across Areas

3.2 Indicator Distribution Across Years: Housing Quality

Figure 3.2 compares how housing indicators are distributed across SA2 areas for the two most recent Census years. Each boxplot shows the typical value in the middle, the range where most neighbourhoods fall, and any unusually high values that appear as dots above the main box. A **higher** box position on the chart indicates that the indicator is generally worse or more common across the TA, while a **taller** box shows greater variation between neighbourhoods. By comparing the two years, it is possible to see whether conditions have improved, declined, or become more uneven over time. In smaller TAs, where the number of SA2s is limited, natural fluctuations between areas can appear more pronounced and should be interpreted with care.

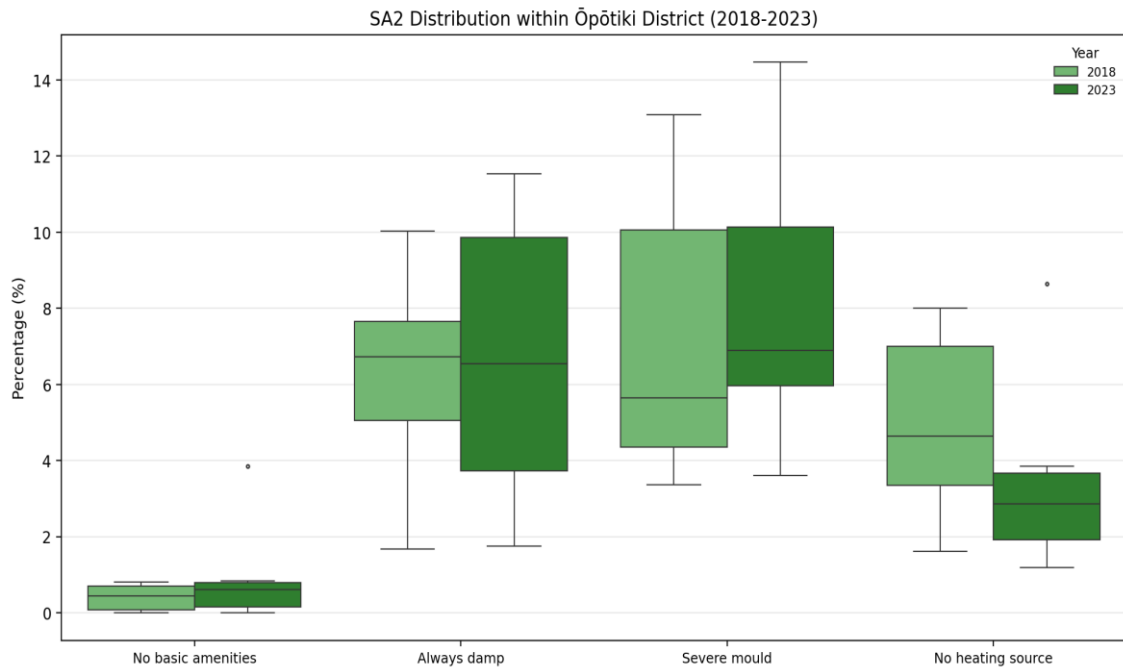

Figure 3.2: Housing Quality - Indicator Distribution Across Years

3.3 Comparison with National Average: Housing Quality

Figure 3.3 compares **Ōpōtiki District**'s results with national averages for each housing indicator. The solid circles represent the TA's values, while the dashed vertical lines mark the New Zealand average. The light green band shows the typical national range observed across all TAs. Indicators positioned to the right of the dashed line are worse than the national average, whereas those to the left indicate better outcomes. This comparison helps highlight whether housing conditions in **Ōpōtiki District** are broadly aligned with, better than, or worse than national patterns.

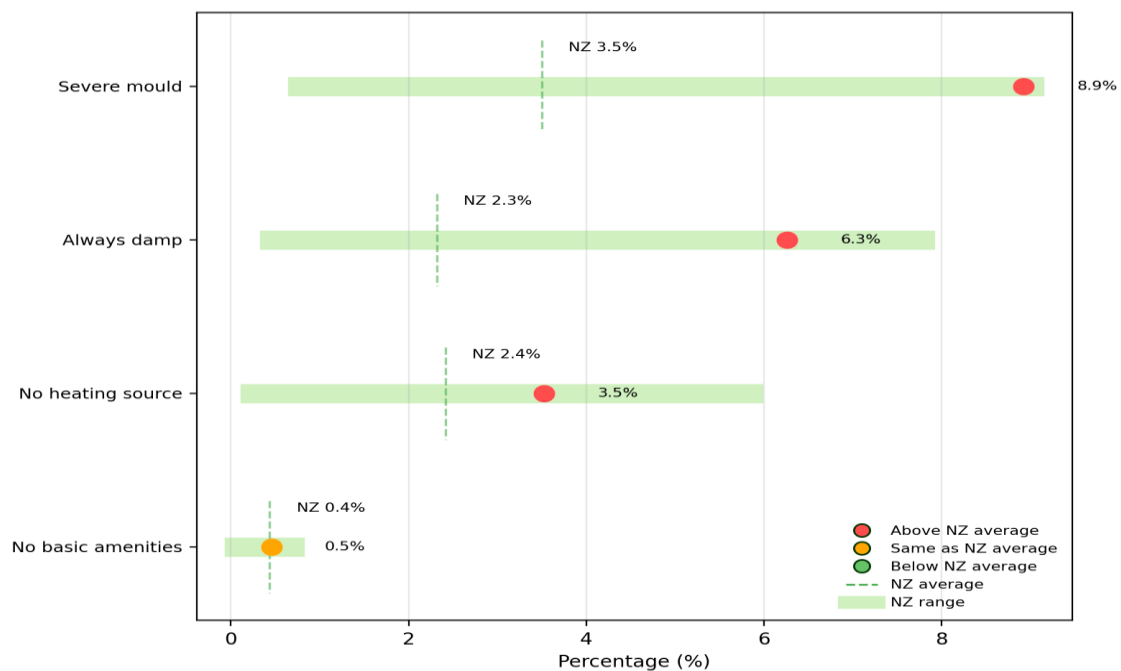

Figure 3.3: Housing Quality: Ōpōtiki District Comparison with National Levels.

4 Living Situation: Map & Population Share

This section describes the living conditions of households in occupied private dwellings. The indicators cover household crowding, access to motor vehicles, and access to telecommunication services. Higher values generally point to greater housing pressure or reduced access to transport and digital services.

In 2023, 348 (11.6%) were crowded households, 48 (1.8%) were no telecommunication, and 129 (4.9%) were no motor vehicle among households in occupied private dwellings. Overall, increases for “Crowded households”; while decreases for “No telecommunication”, “No motor vehicle” since 2018.

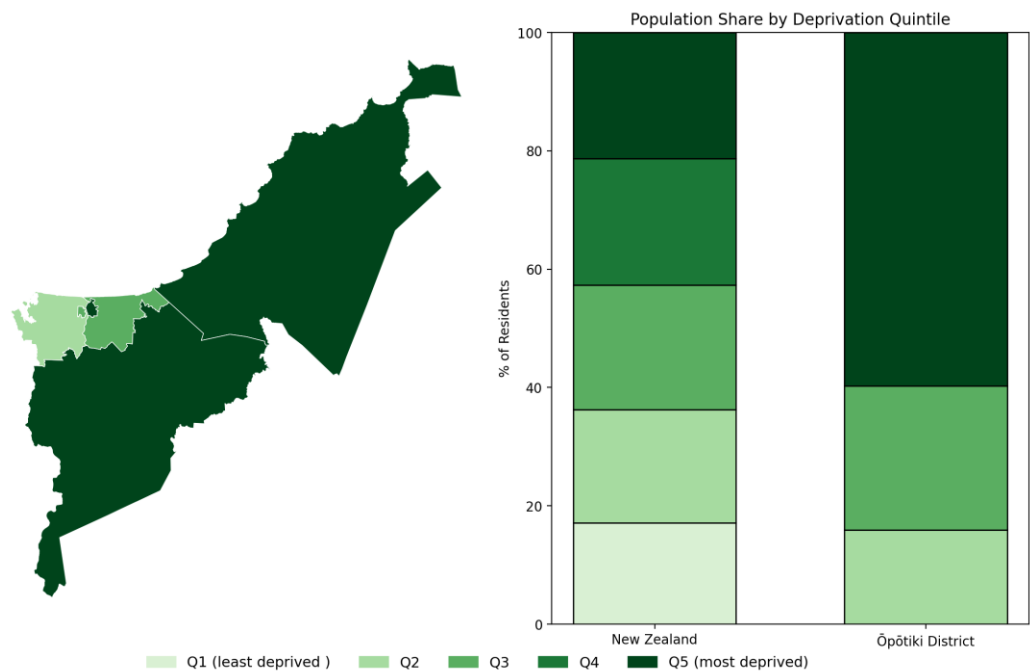

Figure 4: Living Situation- Map & Population Share

Figure 4 map shows how Living Situation conditions vary across SA2 areas in **Ōpōtiki District**. Darker areas represent neighbourhoods with higher levels of crowding, limited vehicle access, or no telecommunication. The bar chart compares **Ōpōtiki District** distribution with national patterns.

4.1 Neighbourhood Patterns: Living Situation

Figure 4.1 heatmap shows how Living Situation indicators change from lower-decile to higher-decile neighbourhoods. Darker shading represents higher percentages. Indicators with steady increases across deciles highlight stronger challenges in household space, connectivity, or transport.

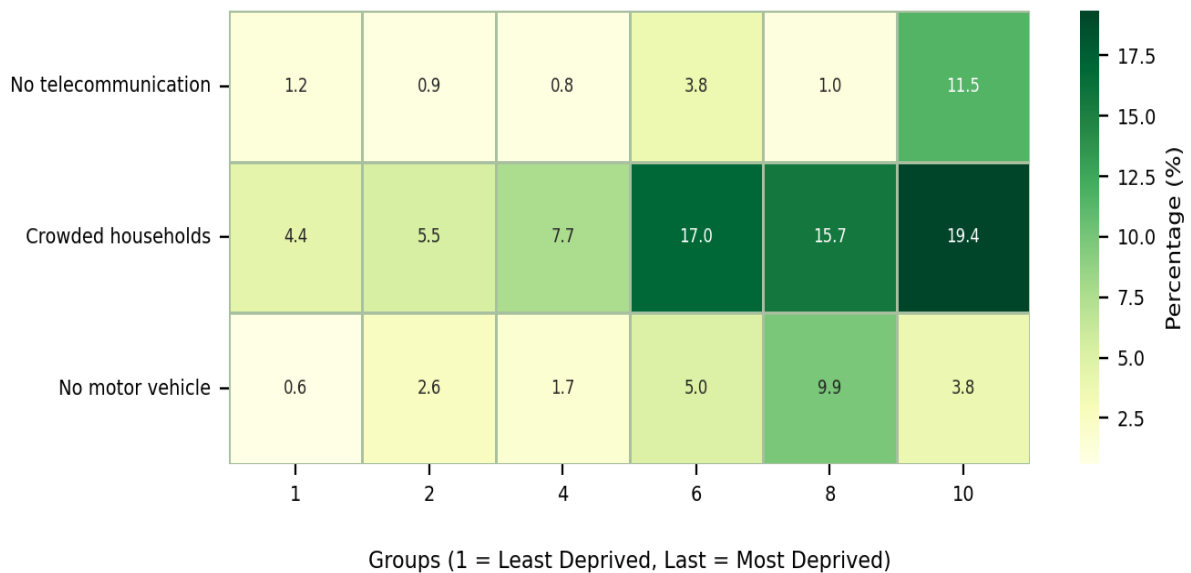

Figure 4.1: Living Situation -Indicator Patterns Across Areas.

4.2 Indicator Distribution Across Years: Living Situation

Figure 4.2 compares the distribution of crowding, vehicle access, and telecommunication indicators across SA2 areas for the two most recent Census years. The central line represents the typical (median) value, the box shows where most neighbourhoods sit, and dots above the box indicate unusually high areas. A higher box position suggests the issue is more common across the TA, while a taller box reflects greater differences between neighbourhoods. Differences may appear more pronounced in smaller TAs where the number of SA2s is limited.

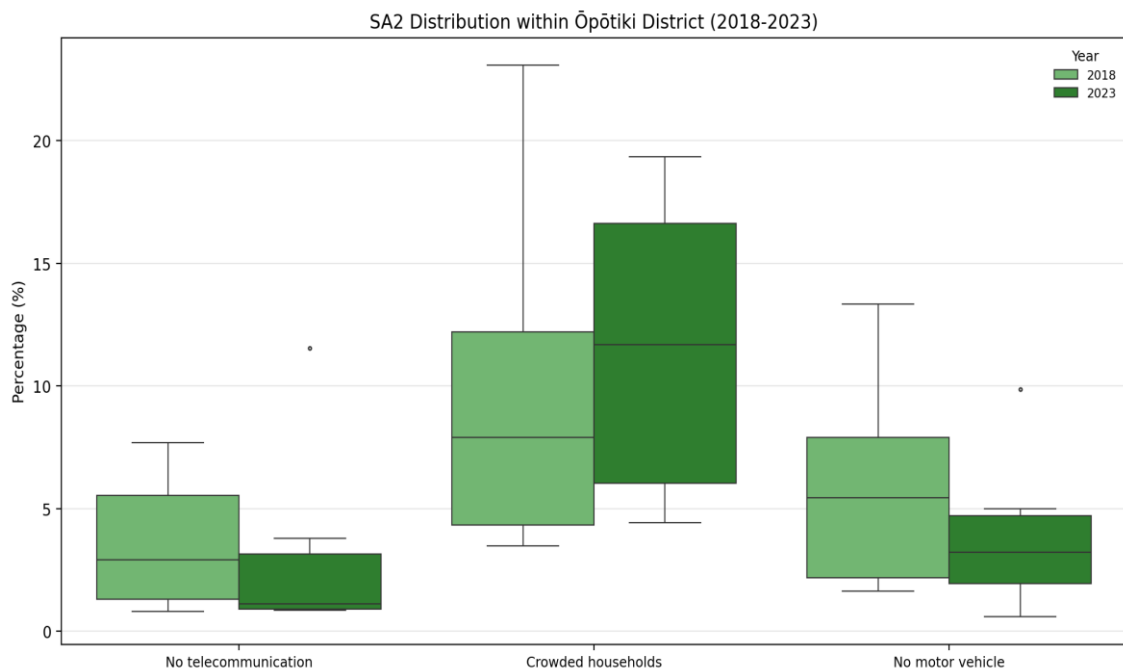

Figure 4.2: Living Situation- Indicator Distribution Across Years.

4.3 Comparison with National Average: Living Situation

Figure 4.3 compares Ōpōtiki District Living Situation indicators with national values. Circles represent local results, dashed lines mark the NZ average, and green bands show the usual NZ range.

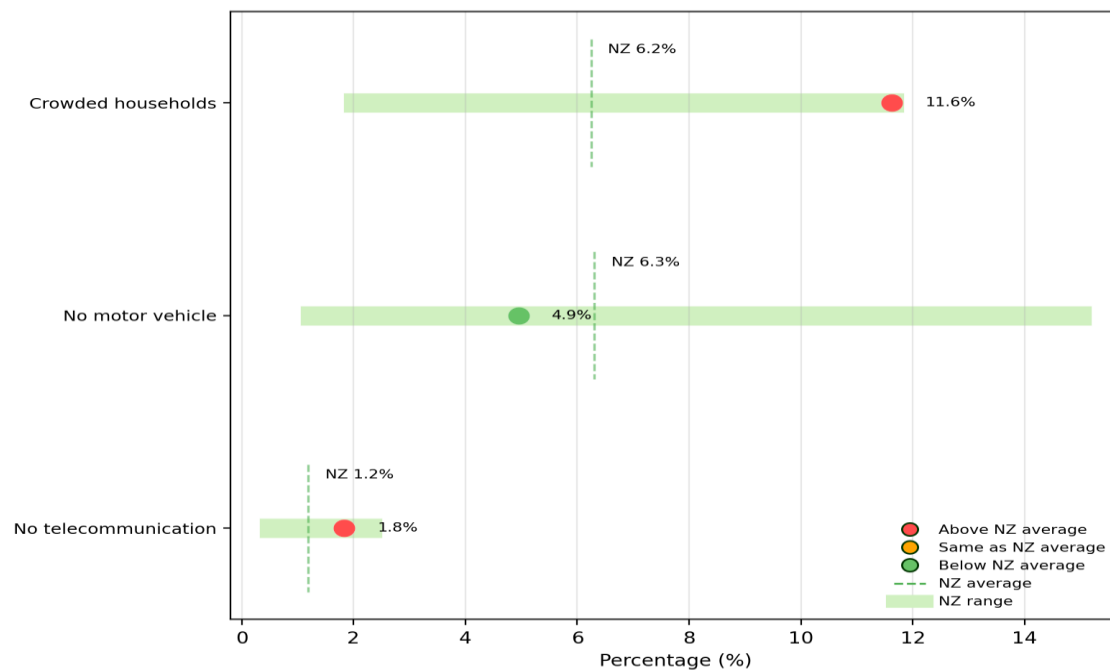

Figure 4.3: Living Situation - Ōpōtiki District Comparison with National Levels

5 Socioeconomic: Map & Population Share

This section explores socioeconomic wellbeing among the usually resident population aged 15 years and over. The indicators cover educational attainment, unemployment, reliance on Jobseeker and Sole Parent Support, and regular smoking rates. Higher values indicate greater socioeconomic hardship and inequality.

In 2023, 1,014 (12.8%) were jobseeker support, 1,800 (24.5%) were no qualification, 1,395 (17.6%) were regular smokers, 390 (4.9%) were sole parent support, and 492 (6.2%) were unemployment among individuals aged 15 years and over. Overall, increases for “Sole Parent Support”; while decreases for “Jobseeker Support”, “No qualification”, “Regular smokers”, “Unemployment” since 2018.

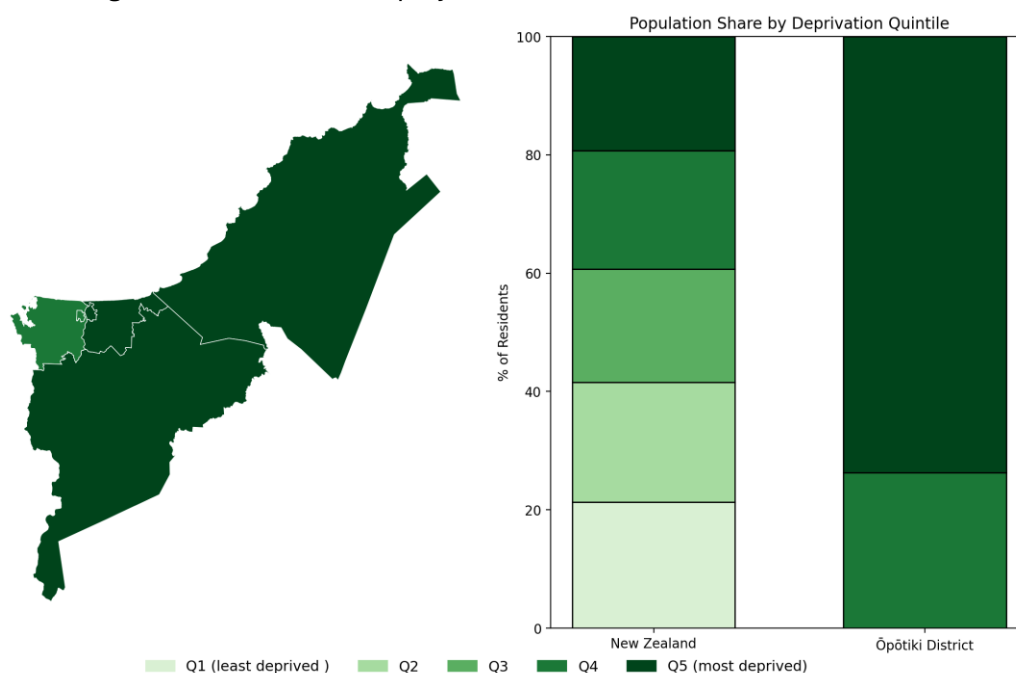

Figure 5: Socioeconomic - Map & Population Share

Figure 5 map shows how socioeconomic conditions differ across SA2 areas in Ōpōtiki District. Darker areas represent higher rates of unemployment, benefit reliance, lower qualifications, or regular smoking. The bar chart compares Ōpōtiki District with New Zealand overall.

5.1 Neighbourhood Patterns: Socioeconomic

Figure 5.1 heatmap shows how socioeconomic indicators change from low-decile to high-decile areas. Darker colours indicate higher levels of unemployment, fewer qualifications, greater benefit reliance, or higher smoking rates.

Figure 5.1: Socioeconomic-Indicator Patterns Across Areas

5.2 Indicator Distribution Across Years: Socioeconomic

Figure 5.2 chart compares the spread of socioeconomic indicators between the latest two Census years. Higher boxes indicate more common or more severe issues, while taller boxes show wider gaps across neighbourhoods.

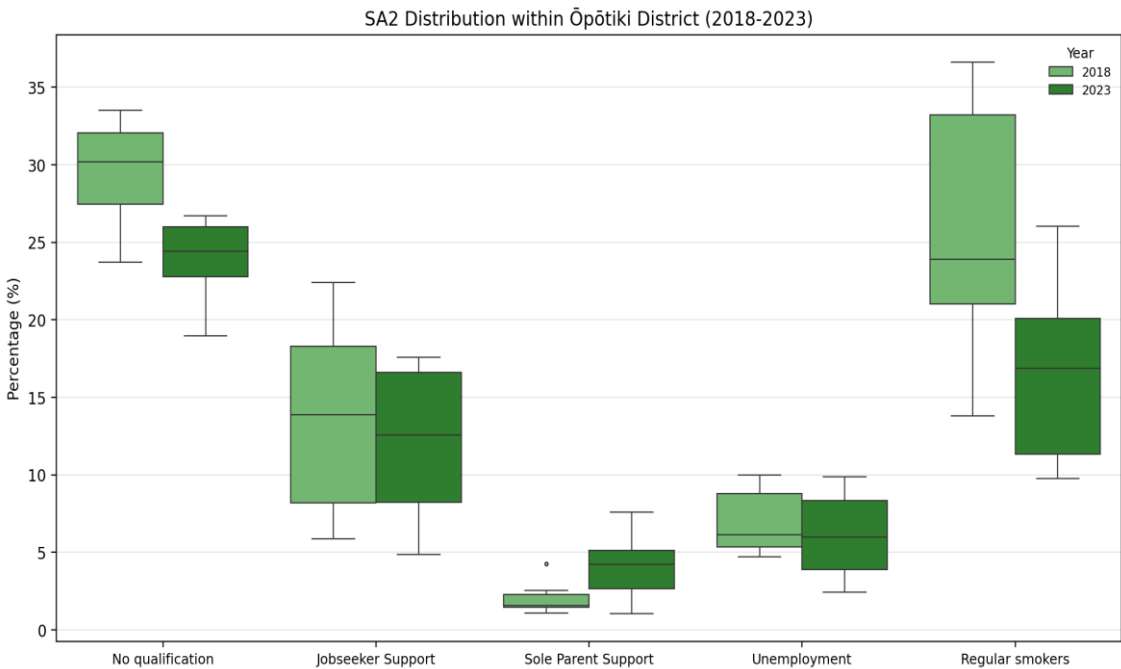

Figure 5.2: Socioeconomic-Indicator Distribution Across Years

5.3 Comparison with National Average: Socioeconomic

Figure 5.3 shows how Ōpōtiki District compares with national benchmarks for education, employment, and income support indicators. Points represent local values, and dashed lines show the NZ average.

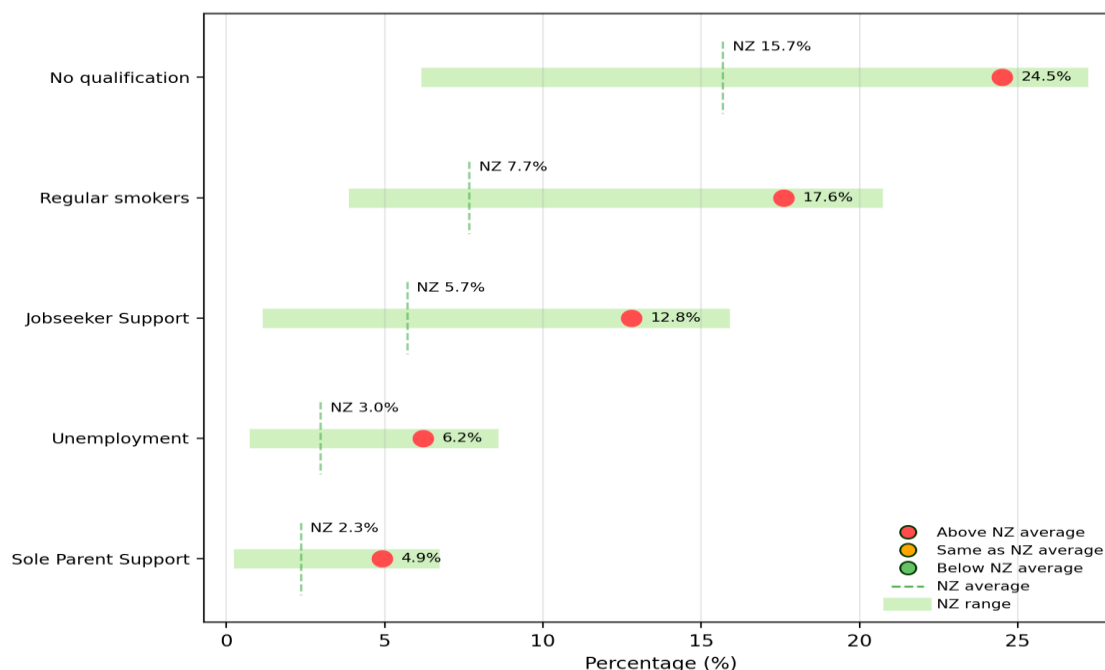

Figure 5.3: Socioeconomic- Ōpōtiki District Comparison with National Levels

6 Indicators Summary Table

This section brings together all key indicators from the Housing Quality, Living Situation, and Socioeconomic domains. Table 6 summarises Ōpōtiki District's local results and compares them with national averages and quartile ranges, providing a simple overview of where the area sits relative to the rest of New Zealand.

Indicator	TA Count	TA (%)	NZ Avg (%)	NZ LQ (%)	NZ UQ (%)	TA vs NZ Avg
No basic amenities	12	0.46	0.44	0.26	0.42	Higher
Always damp	162	6.26	2.31	1.39	2.67	Higher
Severe mould	231	8.92	3.5	2.11	4.11	Higher
No heating source	93	3.53	2.42	0.65	1.51	Higher
No telecommunication	48	1.83	1.19	0.93	1.45	Higher
Crowded households	348	11.62	6.25	3.13	5.92	Higher
No motor vehicle	129	4.95	6.31	3.73	6.17	Lower
No qualification	1,800	24.5	15.68	16.79	23.37	Higher
Jobseeker Support	1,014	12.8	5.72	4.29	6.93	Higher
Sole Parent Support	390	4.92	2.34	1.7	2.99	Higher

Unemployment	492	6.21	2.97	1.9	3.12	Higher
Regular smokers	1,395	17.61	7.67	7.69	11.14	Higher

Table 6: Summary of Key Indicators Compared with National Averages

7 Other Community Measures: Ōpōtiki District

This section presents a set of additional indicators describing rental housing patterns, unpaid work, family structure, and health-related difficulties. These indicators provide further insight into the social and support needs of residents across Ōpōtiki District.

7.1 Landlords

The landlord indicators show the distribution of rented households within **Ōpōtiki District** by landlord type. Figure 7.1 bar chart presents the number of households renting from Kāinga Ora, local councils, iwi or Māori trusts, and community housing providers for **2023**.

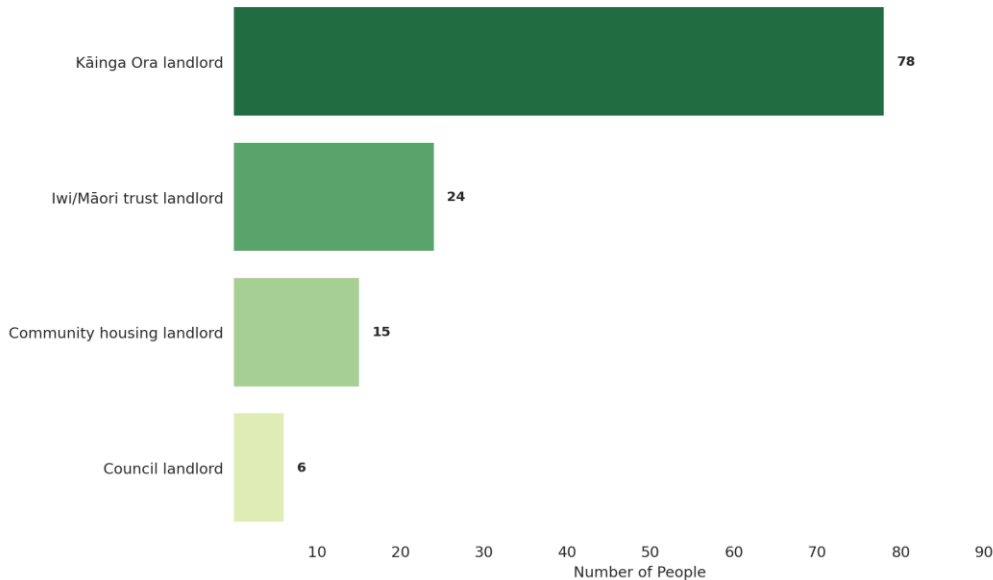

Figure 7.1: Landlord Types (2023)

Table 7.1 lists the local proportions alongside national values, allowing comparison between **Ōpōtiki District** and New Zealand overall.

Indicator	TA Count	TA (%)	NZ Avg (%)	NZ LQ (%)	NZ UQ (%)	TA vs NZ Avg
Council landlord	6	0.64	1.69	1.39	3.48	Lower
Kāinga Ora landlord	78	8.28	11.33	3.15	9.93	Lower
Iwi/Māori trust landlord	24	2.55	0.26	0.04	0.71	Higher
Community housing landlord	15	1.59	1.47	0.76	1.58	Higher

Table 7.1: Landlord Characteristics - Ōpōtiki District Compared with National Values

7.2 Unpaid Care and Support

The unpaid activities indicators describe the forms of unpaid work carried out by residents aged 15 and over in **Ōpōtiki District**. Figure 7.2 bar chart shows the number of people involved in caring for their own children,

supporting ill or disabled family members, assisting people outside their household, and undertaking voluntary work during **2023**.

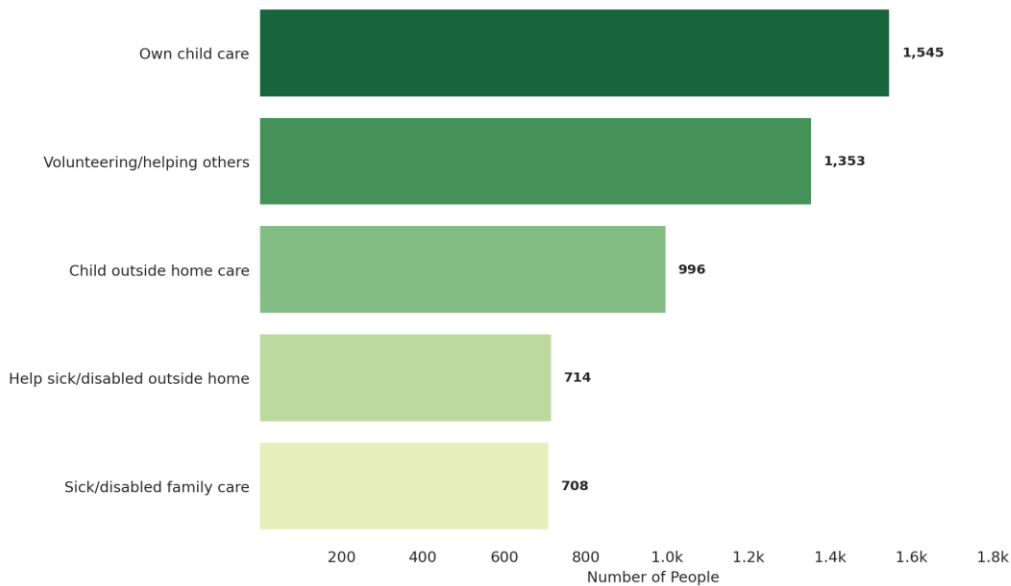

Figure 7.2: Unpaid Care and Support (2023)

Table 7.2 compares these local percentages with national benchmarks to show how **Ōpōtiki District** aligns with wider patterns of unpaid support.

Indicator	TA Count	TA (%)	NZ Avg (%)	NZ LQ (%)	NZ UQ (%)	TA vs NZ Avg
Own child care	1,545	28.85	28.39	25.42	29.3	Higher
Sick/disabled family care	708	13.22	7.85	7.49	9.07	Higher
Child outside home care	996	18.6	12.28	12.89	15.05	Higher
Help sick/disabled outside home	714	13.33	7.86	8.15	9.86	Higher
Volunteering/helping others	1,353	25.27	13.32	14.02	18.55	Higher

Table 7.2: Unpaid Care and Support Indicators - Ōpōtiki District vs National Results

7.3 Family Situation

The family situation indicators describe the relationship status of people aged 15 and older in **Ōpōtiki District**. Figure 7.3 bar chart illustrates the number of residents who are married, separated, divorced, widowed, or never partnered in **2023**.

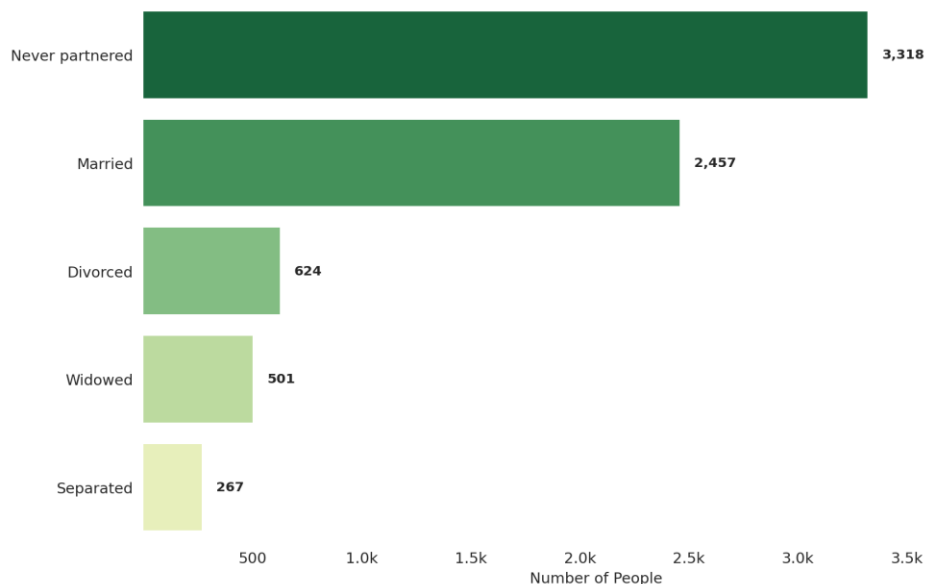

Figure 7.3: Family Situation (2023)

Table 7.3 provides local values alongside national averages, offering context for how relationship patterns in **Ōpōtiki District** compare with the rest of New Zealand.

Indicator	TA Count	TA (%)	NZ Avg (%)	NZ LQ (%)	NZ UQ (%)	TA vs NZ Avg
Married	2,457	34.22	44.74	42.15	48.48	Lower
Separated	267	3.72	2.77	2.81	3.29	Higher
Divorced	624	8.69	7.92	7.99	9.78	Higher
Widowed	501	6.98	4.94	5.26	6.58	Higher
Never partnered	3,318	46.22	39.57	32.81	40.73	Higher

Table 7.3: Family Situation Indicators - Ōpōtiki District vs National Results

7.4 Disability and Health Difficulties

The health and disability indicators show the number of people aged 5 and over in **Ōpōtiki District** who experience difficulty with communication, hearing, vision, mobility, memory, or self-care. Figure 7.4 bar chart summarises the counts for each type of difficulty for **2023**.

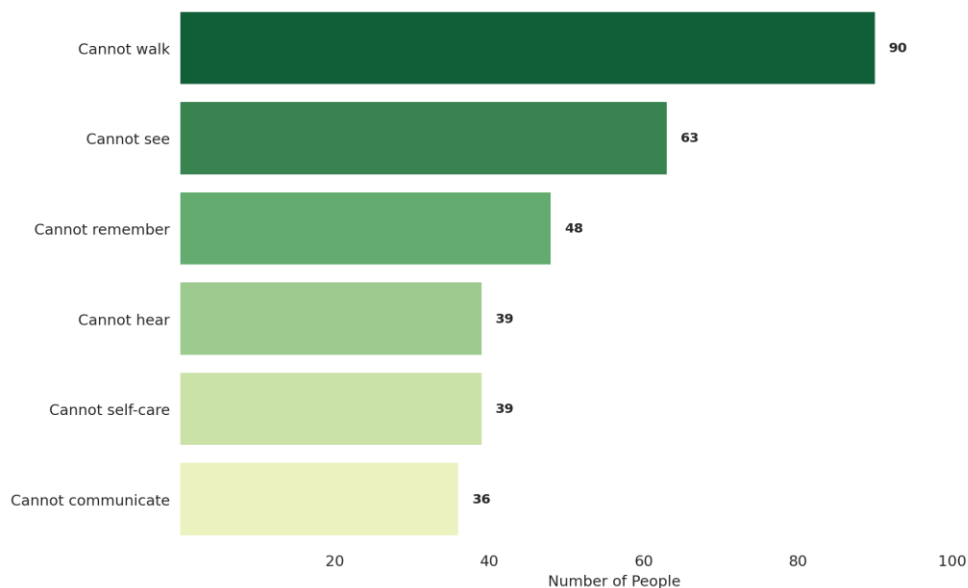

Figure 7.4: Health and Disability Difficulties (2023)

Table 7.4 includes local percentages and national reference values, showing the relative frequency of these health-related limitations within **Ōpōtiki District**.

Indicator	TA Count	TA (%)	NZ Avg (%)	NZ LQ (%)	NZ UQ (%)	TA vs NZ Avg
Cannot communicate	36	0.59	0.16	0.11	0.19	Higher
Cannot hear	39	0.64	0.15	0.09	0.16	Higher
Cannot remember	48	0.79	0.21	0.17	0.26	Higher
Cannot see	63	1.03	0.18	0.13	0.2	Higher
Cannot walk	90	1.47	0.49	0.41	0.62	Higher
Cannot self-care	39	0.65	0.42	0.33	0.48	Higher

Table 7.4: Health and Disability Difficulties - Ōpōtiki District Compared with National Values
